

As a commercial truck driver covering the lower 48 states, it is necessary for me to have one source for up-to-date weather information. So often we are unable to get local weather channels or any other local information. With XM satellite radio I am now able to get this information. I am willing to pay for this information and to have it block from me would be an injustice. Please consider the buying public. I just can't imagine going back to weather on a shoe string. Thank you
